DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 are drawn to ion optical apparatus for producing low energy beam classified in class 315, subclass 111.81
- II. Claims 17-28 are drawn to a deceleration lens system for modulating ion beam classified in class 250, subclass 492.21.

These inventions above are distinct from the other because of the following reasons:

Inventions I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the invention I relates to ion optical apparatus comprising accelerating and decelerating electrodes for producing ion beam in desired energy manner while the invention II relates to ion extraction or deceleration lens products utilizing accelerating and decelerating electrodes to attenuate ion beam shape to a target.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
